

JOB TITLE: Open Source Developer

The Role:

The Open Source Developer will be involved in infrastructure development for automated solution development using JVM-based tools as well as development of solutions for both client and internal deployment.

Qualifications and experience:

Skill set requirements:

1. Strong operational experience in code deployment and rapid deployment of systems and applications, including development of infrastructure for automated solution deployment using JVM-based tools
2. Strong software development experience using open source tools such as Linux, Java, mysql, Java and JVM-based languages such as Clojure
3. Strong software development experience in web-enabled delivery of services (e.g. Cloud computing delivery model)
4. Compelling track record of creative out-of-the-box problem-solving with a team-oriented approach, lots of self-initiative and ability to work independently, ideally within the asset management industry
5. Proven development experience amid highly time-sensitive settings with infrastructure and resource challenges, and continuously shifting priorities and approaches, ideally with client-facing experience
6. Flexibility and composure in dealing with challenging and demanding internal and client-facing situations with the ability to negotiate viable compromises, if imperfect solutions
7. Strong experience in the development of Front Office, Middle Office and Back Office systems, ideally at asset management firms
8. Strong experience in the development of business/functional/technical specs
9. Strong experience writing RFPs, responding to RFPs, and evaluating RFPs
10. Experience in 3rd-party software solutions in the areas of performance/attribution, portfolio accounting, benchmark data management, or, risk management.
